PostalMate helps you meet the demands of PCI Compliance. It is important to understand, as a store owner, what the requirements are and any other steps that you will need to do. Installing one piece of software or upgrading software is not solely the solution for PCI Compliance. The following statement is from the PCI Security Council:

"The PCI DSS is a multifaceted security standard that includes requirements for security management, policies, procedures, network architecture, software design and other critical protective measures. This comprehensive standard is intended to help organizations proactively protect customer account data"

Please visit www.pcisecuritystandards.org/merchants/ for more information regarding PCI compliance and how this affects your business. You can also visit www.pcisecuritystandards.org/pci_security/completing_self_assessment where you will find a Self-Assessment Questionnaire (SAQ) provided by the PCI Security Council.
